

2018 PPSA PORT HANDICAP & STABILITY SAFETY SCREENING LIST

Notes:

BASE NUMBER This is the starting handicap that is used in the RYA's National Handicap for Cruisers (NHC) system. Base Number is a very crude handicap that is intended to be adjusted during the course of a race series to one that more fairly represents actual performance on the water. Base Number for many classes of boat can be found on the RYA web site. The Port Handicapper can provide Base Numbers for boats not on the RYA list using the identical RYA formula.

This column includes end of 2017 season adjustments advised by club sailing officers.

For 2018 Handicaps have been adjusted from advice provided by club sailing officers based on club results during 2017. In addition Port Handicaps have been adjusted GLOBALLY by plus 0.82% so that the average of all Port Handicaps has been maintained equal to the average of all RYA Base Numbers. This latter adjustment is necessary to prevent "drit" of Port Handicaps from the RYA National Handicap for Cruisers scheme.

PORT HANDICAPS Port Handicaps are intended for use in one-off races and events when NHC has no opportunity to adjust handicaps. Port Handicaps represent the best information available of the speed of a boat relative to other boats in the port of Plymouth, when racing in an average mixed fleet of Plymouth boats, in average conditions in Plymouth, and in average Plymouth waters. Port Handicaps are maintained on a par with the NHC system ie the average of Port Handicaps is maintained the same as the average of Base Numbers. All this means that a Port Handicap is the handicap that it is estimated would result at the end of a consistent race series held under NHC.

STABILITY SAFETY SCREENING Stability Safety Screening Numbers (SSSN) are provided on request for yachts that intend to enter Category 3 Races when this information is not available from other sources such as an IRC certificate.
